EXPERIMENT 10 A

INTERNETWORKING WITH ROUTERS.

AIM: To design and configure a simple internetwork using a router in Cisco Packet Tracer by connecting different networks containing 3-4 hosts.

ALGORITHM:

1. Start Cisco Packet Tracer.
2. Place One router, two switches and 6 PC's in the workspace.
3. Connect 3 PC's to each switch using Copper Straight Through Cables.
4. Connect first switch to routers Gigabit Ethernet 0/0 interface
5. Connect the second switch to router 0/1 interface.
6. Assign static IP address to all PC.
7. Enable the router interface
8. Test connectivity using ping

PROCEDURE:

1. Place the Required PC's, switches & router and connect them.
2. Configure static IP address for all PC and router interface IP address
3. Set the router interface as default gateway
4. Use ping to verify communication, select simulation mode and send a test packet.

RESULT:
